EDUCATION

University of Wisconsin - Madison

Sep 2023 - May 2027

B.S. Computer Science

GPA: 3.9/4.00

Relevant Coursework: Algorithms, Operating Systems, Big Data Systems, Artificial Intelligence & Discrete Math

EXPERIENCE

Software Engineer Intern

May 2026 - Present

Netflix

Los Gatos, CA

- Drove **\$30M+** in projected savings by leading a UX-focused A/B test on the member cancel flow to improve subscriber save rate, spanning the React frontend to several upstream GraphQL and Falcor endpoints.
- Increased my org's dev velocity by building a one-click ALT feature for an internal operator tool, letting engineers open a logged-in test-account session instantly.
- Patched a mirroring bug on `cssjanus`, an **open-source** RTL CSS library with **600,000+** weekly downloads.
- Diagnosed and fixed critical latency correctness bugs in a high-traffic Falcor data endpoint serving the cancel flow.

Founding Engineer

Dec 2025 - May 2026

Intelligible AI

Remote

- Built the data ingestion pipelines for the first **4** database connectors (Postgres, MySQL, Snowflake, BigQuery) across multiple Lambdas + Step Functions, enabling our customers to securely integrate their production data.
- Integrated Fivetran Connect Card with a webhook-driven sync lifecycle across **8** Lambdas, expanding the platform from **4** native connectors to **700+** supported data sources without per-source auth code.
- Led migration of infrastructure-as-code from AWS CDK to SST, cutting PR deploy times by **85%** and enabling local preview environments that accelerated the team's ship cadence from weekly to daily.

Software Engineer Intern

June 2025 - Aug 2025

CargoLabs

Remote

- Eliminated **8+ hours/month** of manual work by automating bordereau reporting w/ an AWS + SQL cron job.
- Standardized authentication pipelines across **7 AWS Cognito** user pools while implementing consistent UI design, creating unified user workflows and reducing authentication complexity across all portals.
- Built comprehensive customer service portal enabling the CargoLabs team to efficiently manage and troubleshoot client website problems, reducing average issue resolution time by **45-60%**.

PERSONAL PROJECTS

BadgerBase 🦡 | *Next.js, Node.js, MySQL, Vercel, GitHub Actions, Redis*

- Created a web app that has reached **2000+ active student users** that optimizes the UW Madison course sign-up experience by integrating course, professor, and grade data from multiple sources.
- Reverse engineered UW APIs to build daily data collection pipelines using GitHub Actions for reliable updates.
- Designed a MySQL database serving enrollment & grade data for **20,000+** sections, with a Redis caching layer and serverless API endpoints to optimize latency and scalability during peak traffic.
- Built an automated Amazon SES email service that alerts students when competitive sections & courses open, built on a secure Supabase Auth system with a personalized dashboard for managing course alerts.

March Madness Bracket Predictor | *Python, XGBoost, LightGBM, scikit-learn*

- Built an ensemble model (XGBoost, LightGBM, HistGBM) trained on KenPom efficiency ratings, seeding, and historical tournament data, achieving **81% win prediction accuracy** and winning a 20-participant bracket pool.
- Developed a simulation script to project round-by-round outcomes across the full 64-team bracket, propagating win probabilities through each stage of the tournament.

SKILLS

Languages: Python, TypeScript/JavaScript, Java, C, SQL

Frontend: Next.js, React, Tailwind, Zustand, PostHog, Vercel

Backend: Node.js, Bun, Hono, GraphQL, Spring Boot, Flask, DynamoDB, Redis, MySQL, Supabase

Infrastructure: AWS (Lambda, Step Functions, ECS, S3), SST, Docker, Railway, GitHub Actions
